PHISHING EMAIL DETECTION & AWARENESS

STRATEGIC CYBERSECURITY ASSESSMENT

PREPARED BY: Lemina K

POSITION: Cyber Security Intern

ORGANIZATION: Future Interns

DATE: April 2026

01. INTRODUCTION

Phishing is one of the most common and dangerous cyber attacks used to trick users into revealing sensitive information such as passwords, banking details, and one-time passwords (OTPs).
Attackers send fraudulent emails that appear to come from trusted organizations. These emails often create urgency or fear to manipulate users into clicking malicious links or providing confidential data.
This report analyzes selected email samples to identify phishing indicators, classify risk levels, and provide awareness guidelines to help users recognize and prevent such attacks.

02. OBJECTIVES

This report aims to provide a structured framework for identifying and mitigating phishing risks. The core objectives include:

- **Deconstruct** common phishing methodologies.
- **Classify** environmental risks based on observed email samples.
- **Empower** users with repeatable detection frameworks.
- **Standardize**response protocols for suspicious activity.

03. METHODOLOGY

To ensure a comprehensive analysis, the following multi-step approach was utilized:

1. Sample Collection: Gathering diverse email types ranging from legitimate corporate comms to malicious scripts.
2. Header & Content Analysis: Examining the sender's address, subject line urgency, and grammatical consistency.
3. URL Inspection: Utilizing hover-techniques and sandbox analysis to inspect underlying links without execution.
4. Indicator Mapping: Cross-referencing findings with known phishing patterns.

04. EMAIL SAMPLE DOCUMENTATION

S01 | High-Risk Threat

SUBJECT: Urgent: Your Account Will Be Locked

From: Security Support

Dear User,

Suspicious activity detected. To prevent suspension, verify immediately.
Link: http://secure-account-verify.com

Indicator: Urgency + Non-matching official domain.

S02 | Verified Safe

SUBJECT: Monthly Account Statement

From: Official Bank

Dear Lemina,

Your monthly statement is available. Please log in to your portal.
Link: https://www.yourbank.com/login

Indicator: HTTPS + Personalized greeting + Official domain.

S03 | Suspicious Activity

SUBJECT: You've Won a Prize!

From: Reward Center

Congratulations! You've won a $1000 gift card.
Link: http://free-reward-now.xyz

Indicator: Unrealistic offer + Unknown TLD (.xyz).

05. RISK ANALYSIS MATRIX

SAMPLE ID	KEY INDICATORS	CLASSIFICATION
S01	Threatening Urgency, Generic Greeting	PHISHING
S02	Personalized, Official Domain	SAFE
S03	Unsolicited Reward, Non-Standard TLD	SUSPICIOUS

06. THE PHISHING LIFECYCLE

1. ATTACKER
Crafts Email

▸

2. DELIVERY
Bypasses Spam

▸

3. EXPLOIT
User Clicks

▸

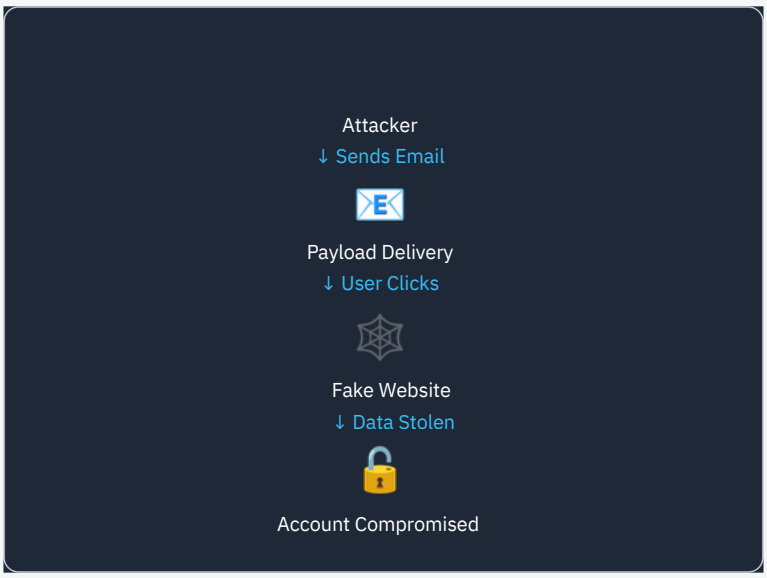
4. BREACH
Data Stolen

Key Red Flags

Look-alike Domains: Attackers register domains that look nearly identical to real ones (e.g., *microsoft-support.com* instead of *microsoft.com*).

Sense of Panic: Legitimate companies rarely threaten to delete accounts within hours via an automated email.

HOW PHISHING WORKS



07. PREVENTION & BEST PRACTICES

- Always **hover** over a link before clicking to see the true URL.
- Verify unexpected emails by calling the sender at a known, official number.
- Report all suspicious messages to **security@organization.com** immediately.

THE DO'S	THE DON'TS
• Check sender address	• Click unknown links
• Use MFA	• Share passwords
• Report threats	• Trust caller ID
• Stay calm	• Rush actions

08. CONCLUSION

Effective defense against phishing is 10% technology and 90% awareness. By implementing the verification steps outlined in this report, users become a proactive firewall against cyber threats. Continuous education is the only sustainable defense in an evolving threat landscape.
